

DOCUMENTED. AUDITABLE. ZERO LANDFILL

IT ASSET DISPOSITION

We don't just haul away old hardware. We take on your compliance and data-security risk, execute a documented chain-of-custody process, and hand it back to you solved, with the paperwork that protects you if anyone ever questions what happened to that equipment. **The equipment is just what's retired — the risk is what we actually manage.**

 NIST SP 800-88 Data security, regulatory compliance, and brand protection.	 ENVIRONMENTAL IMPACT Responsible recycling and reuse that supports your sustainability goals.	 VALUE RECOVERY Remarketing and reuse programs that return maximum residual value.	 AUDIT-READY DOCUMENTATION Complete chain-of-custody and reporting for confidence and compliance.
---	---	---	--

SIX STEPS TO FINAL DISPOSITION

Every asset tracked by serial number from your loading dock to certified end-of-life.

- | | | |
|---|--|--|
| 01
INVENTORY & ASSET TAGGING
Equipment is inventoried and custody is documented at pickup. Every data-bearing device is recorded by serial number at intake. On-site serialization and asset tagging available as a scoped service. | 02
SECURE TRANSPORT & CUSTODY
Documented custody from your dock to our facility, with transfers logged at pickup and receipt. Witnessed on-site destruction available. | 03
SANITIZATION OR DESTRUCTION
All data-bearing media wiped to NIST SP 800-88 Clear, Purge or Destroy. Anything that can't be reliably wiped is shredded. |
| 04
TESTING, GRADING & VALUE RECOVERY
Working equipment is tested, graded and remarketed with recovered value credited back to you. Never at the expense of security. | 05
RESPONSIBLE DOWNSTREAM RECYCLING
Non-resalable material goes to vetted, R2v3-equivalent partners. Never landfill, never uncontrolled export. Every vendor audited. | 06
ASSET-LEVEL REPORTING
A complete package your IT, legal, and sustainability teams can file; certificates, custody log and summary reporting. |

WHAT YOU RECEIVE

CoDD	CERTIFICATE OF DATA DESTRUCTION Serialized per device — asset ID, destruction method, technician verification and date. Your proof in an audit or breach investigation.
CoR	CERTIFICATE OF RECYCLING Documents that every material stream reached responsible final disposition. Zero landfill, no uncontrolled export — ESG-ready.
CoC	CHAIN-OF-CUSTODY REPORT An unbroken, asset-level record of who held each device from pickup through final outcome, by serial number.

WHAT R2V3 ACTUALLY MEANS

R2V3 is an independently audited operating standard from SERI, an ANSI-accredited nonprofit, covering ten core requirements. Two of them are why clients choose a certified provider.

- | | |
|---------------|---|
| CORE 7 | Data Security. Every data-containing device secured from the moment it enters our control, then sanitized or physically destroyed. |
| APP. B | Data Sanitization. Mandatory for any facility performing logical wiping for reuse. Requires device-level sanitizations records. |
| APP. A | Downstream Chain. Every downstream vendor verified, with material tracked to final disposition. |

EVERY DATA-BEARING DEVICE

SERVICES & BLADES	STORAGE ARRAYS & SANs	LAPTOPS & DESKTOPS
SWITCHES & ROUTERS	FIREWALLS & APPLIANCES	HARD DRIVES
SSDs	MOBILE & TABLETS	TAPE MEDIA
		USB / FLASH
COPIERS & MFPS	LOOSE DRIVES & SSDs	VOIP & UNIFIED COMMS
UPS & POWER	WIRELESS ACCESS POINTS	THIN CLIENTS & VDI

! Don't overlook copiers and MFPS. Modern multifunction printers keep an internal hard drive holding copies of everything every scanned, faxed or printed. It is the most commonly missed data-bearing device in a decommission — and a frequent source of compliance exposure.

WHICH REGULATIONS REQUIRE DOCUMENTED ITAD

If your organization is subject to any of these, undocumented hardware disposal is a compliance gap — and a liability that stays on your books.

HIPAA	SOX	GLBA	PCI-DSS
FISMA	CCPA / VCDPA	FERPA	GDPR

CUSTOMER SUCCESS STORY

"Large data center decommissioned with confidence."

This client's project included 100 Dell chassis, 400 Dell server blades, and more than 12,000 HDDs and SSDs. Every drive was wiped and logged, all gear was certified for recycling, and the customer recouped \$700K in value from the decommissioned product.

Certified wiping, documented recycling, and recovered value — delivered at scale.

RETIRE YOUR HARDWARE THE RIGHT WAY.

Request a free ITAD assessment. We'll scope your project, answer your compliance questions, and tell you exactly what documentation you'll receive — before you commit to anything.
